

Zomato Business Analyst Project

Md ARSHAD

Dataset Overview

- Total Restaurants: 400
- Columns: restaurant_id, name, city, cuisine, aggregate_rating, votes, average_cost_for_two, delivery_time_mins, is_online_delivery, has_table_booking, restaurant_type, rating_category
- Data cleaned and stored in SQLite database
- EDA performed to understand distribution and patterns

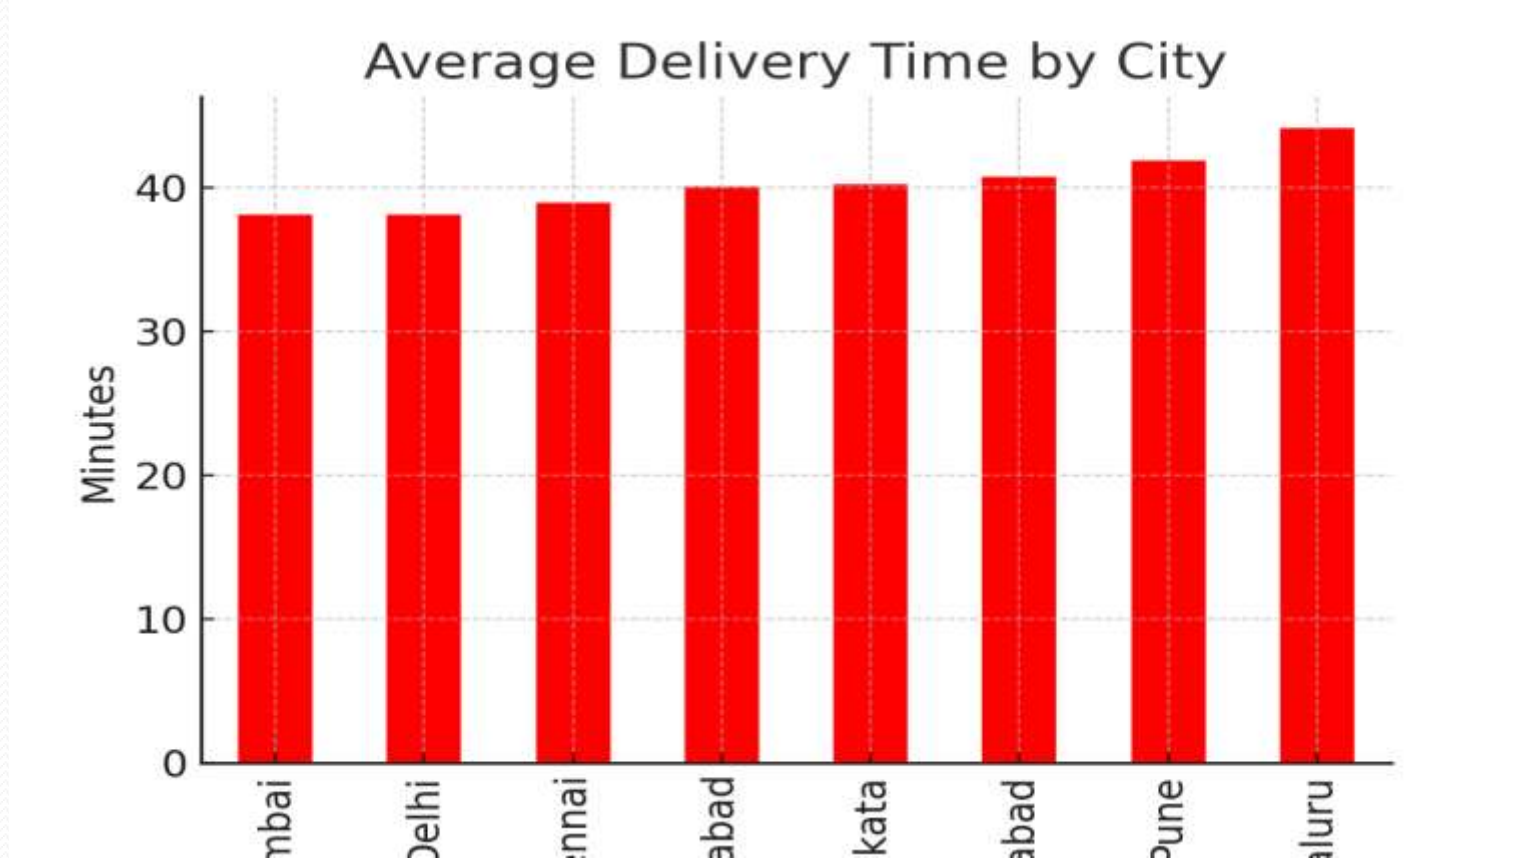

Project Objective

- Analyze Zomato restaurant data
- Extract business insights using Python, SQL, and ML
- Predict delivery time using Linear Regression
- Generate data-driven recommendations

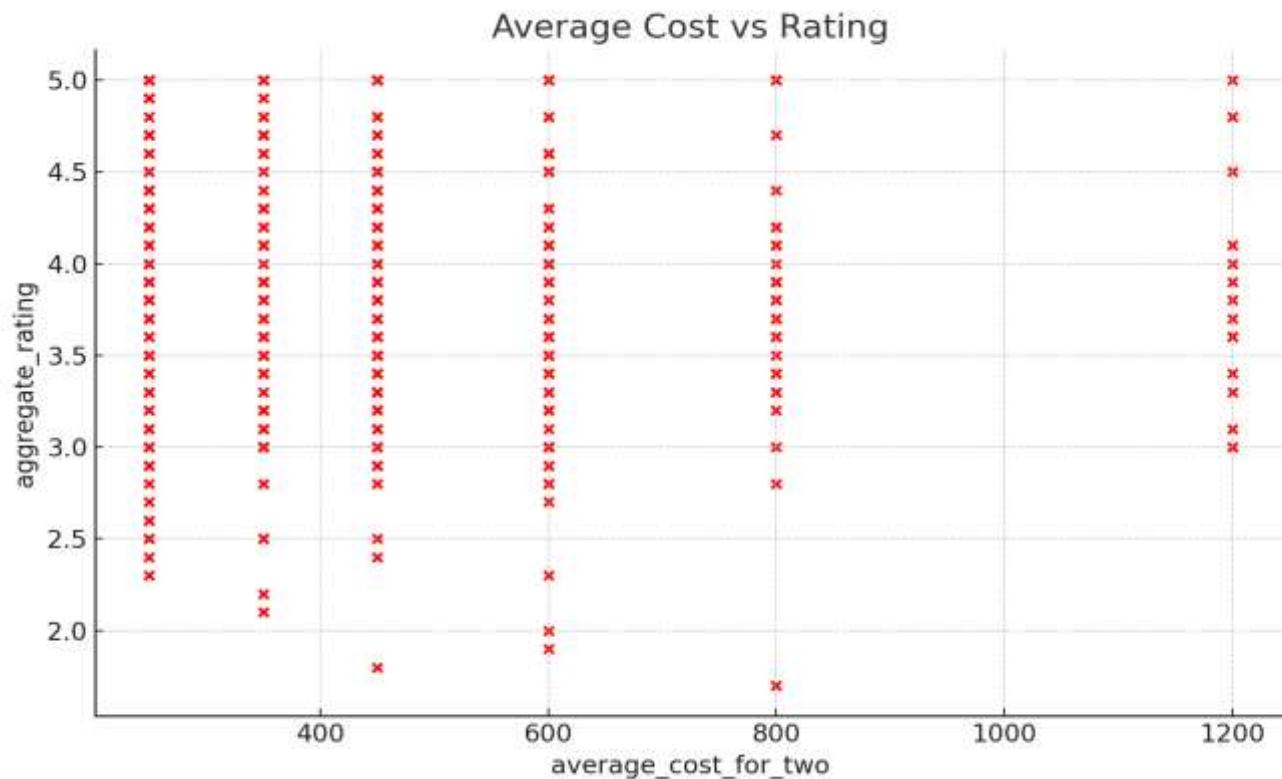

Restaurant Ratings Distribution

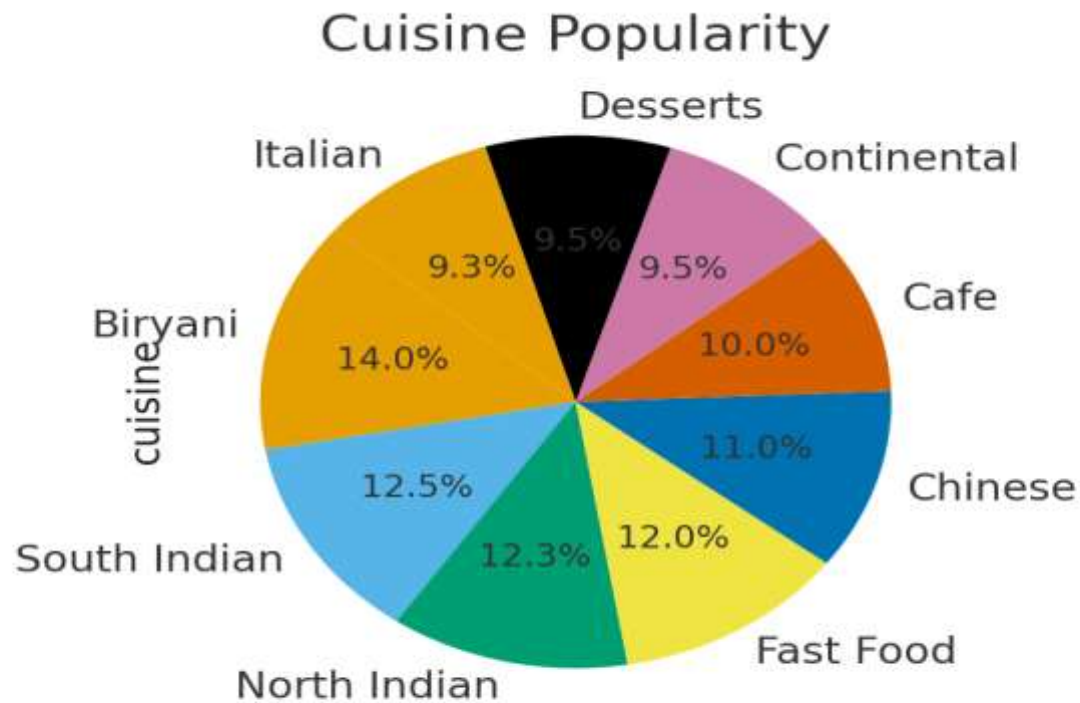

Average Delivery Time by City

Average Cost vs Rating

Cuisine Popularity

Predicted vs Actual Delivery Time

Slide 44

- Content placeholder for business insights, SQL results, ML outputs, KPIs, recommendations

Slide 45

- Content placeholder for business insights, SQL results, ML outputs, KPIs, recommendations

Business Recommendations

- Focus on cities with lower ratings
- Promote top cuisines in targeted campaigns
- Introduce fast delivery offers to enhance ratings
- Maintain affordable pricing for higher engagement

Future Scope

- Include more ML models (Random Forest, XGBoost)
- Connect to live Zomato API for real-time data
- Interactive dashboards using Power BI / Tableau

About Me / Thank You

- Md ARSHAD
- B.Tech in Computer Science
- Data Analyst Enthusiast
- Thank you!
